ASKAP DINGO, HERSCHEL ATLAS, VISTA VIKING, VST KIDS, GALEX and the Durham ICC

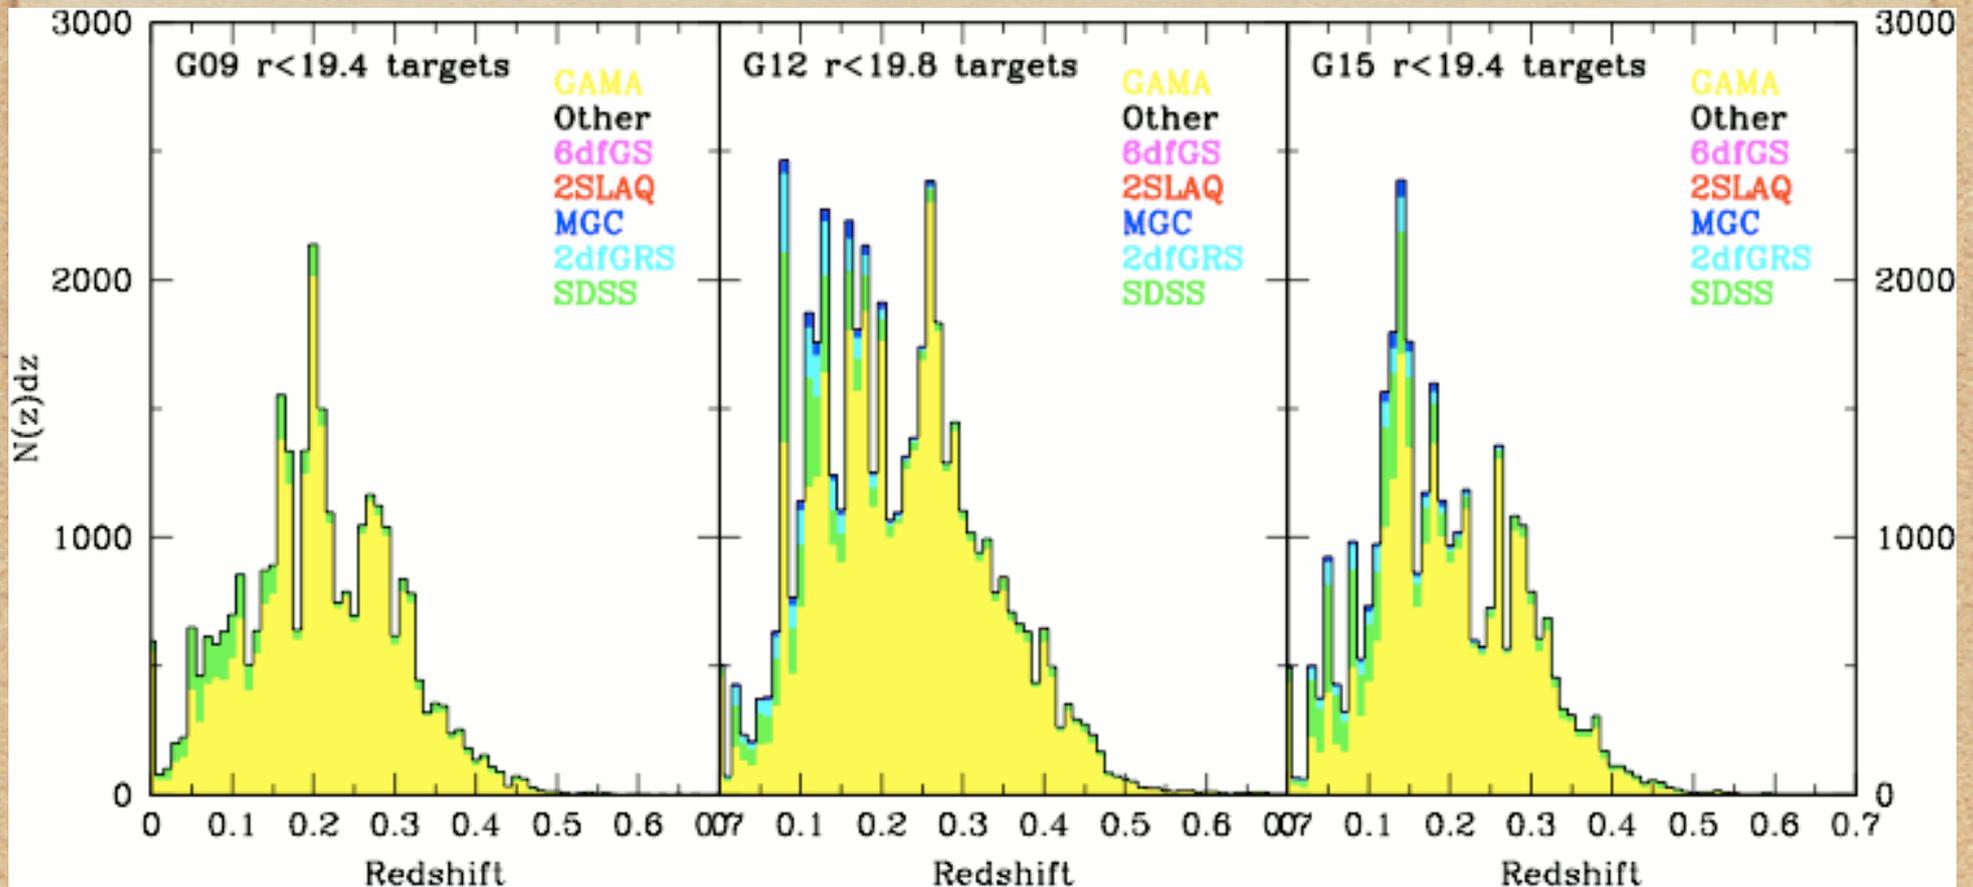

GAMA Key Science

- ◆ A measurement of the dark matter halo mass function of groups and clusters using group velocity dispersion measurements.
- ◆ A comprehensive determination of the galaxy stellar mass function to Magellanic Cloud masses to constrain baryonic feedback processes.
- ◆ A direct measurement of the recent galaxy merger rates as a function of mass, mass ratio, local environment and galaxy type.

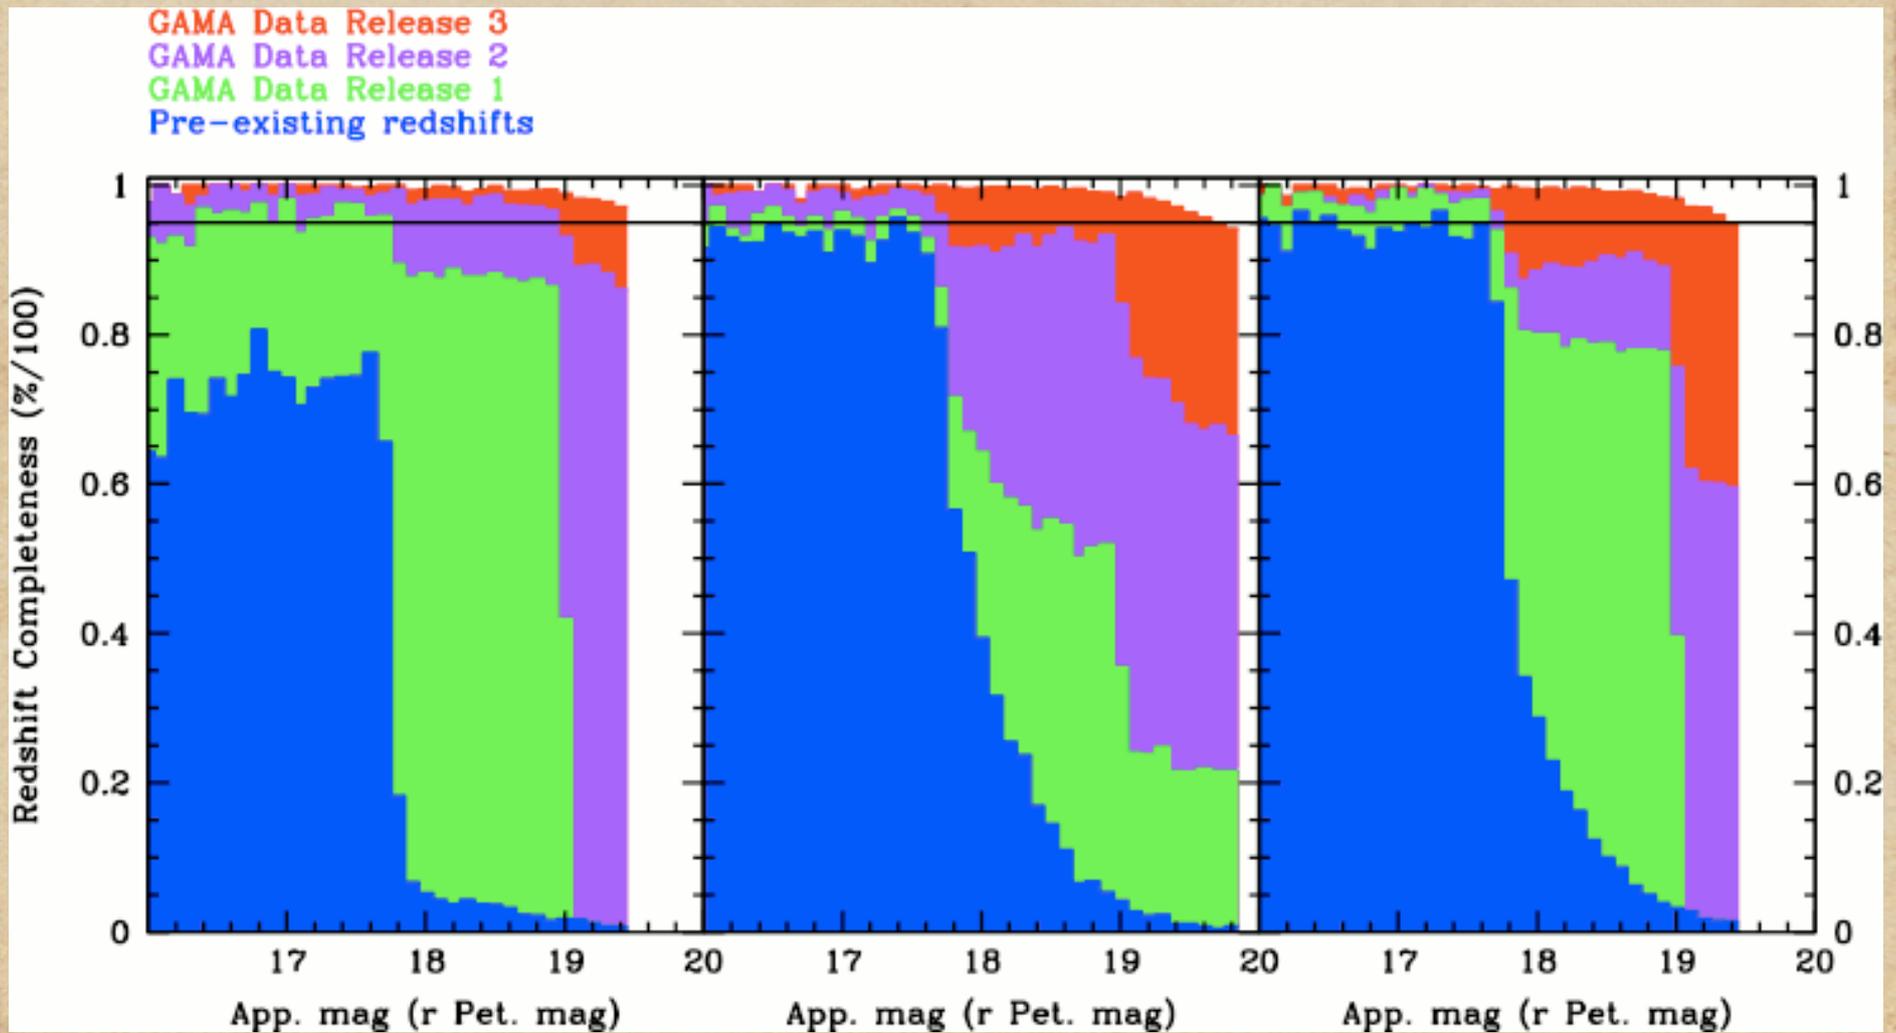

GAMA survey area

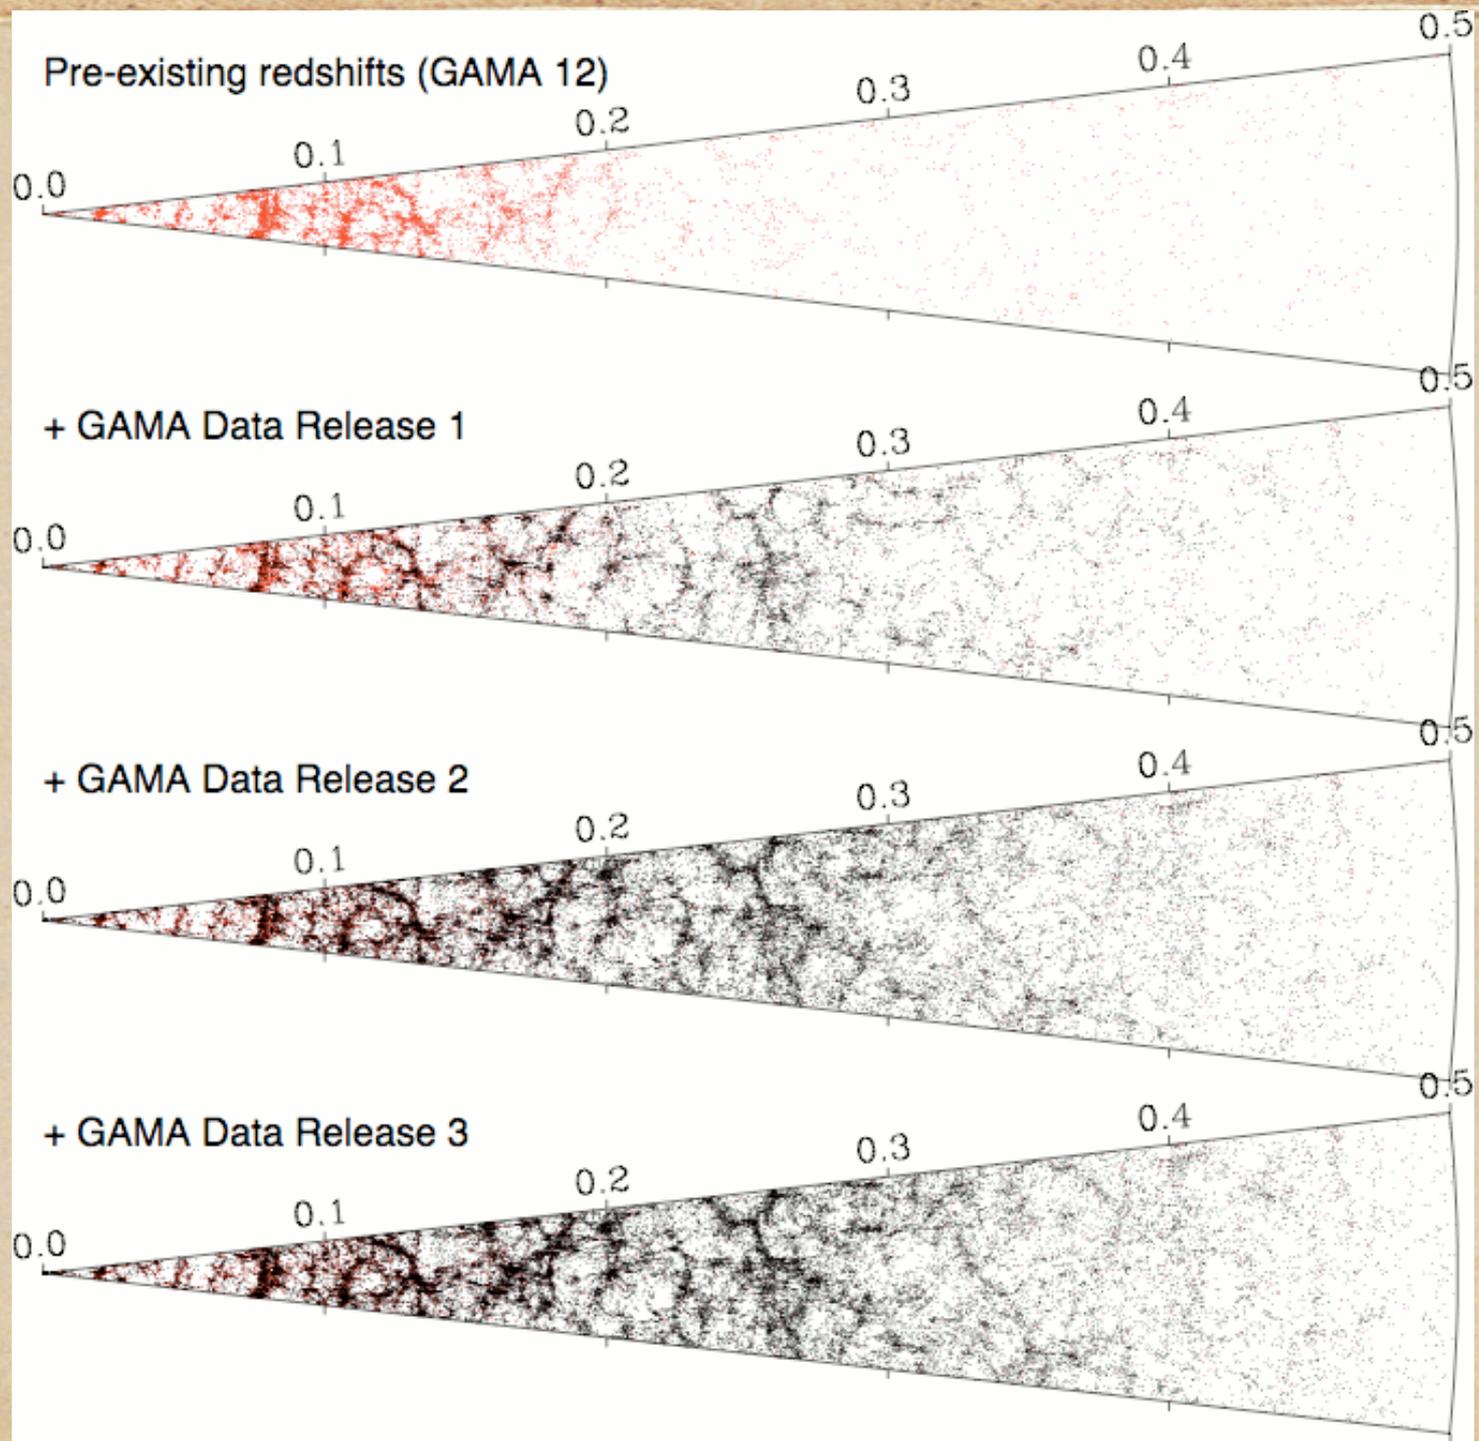

Redshift distribution

Redshift completeness

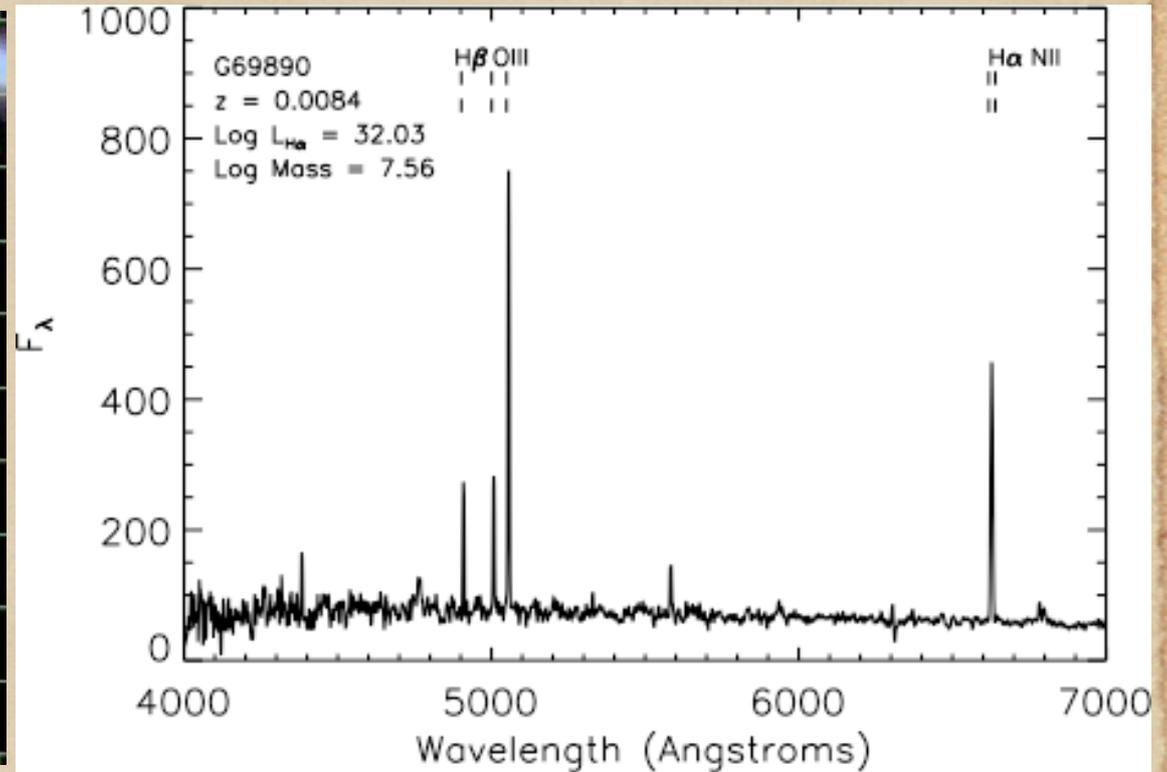

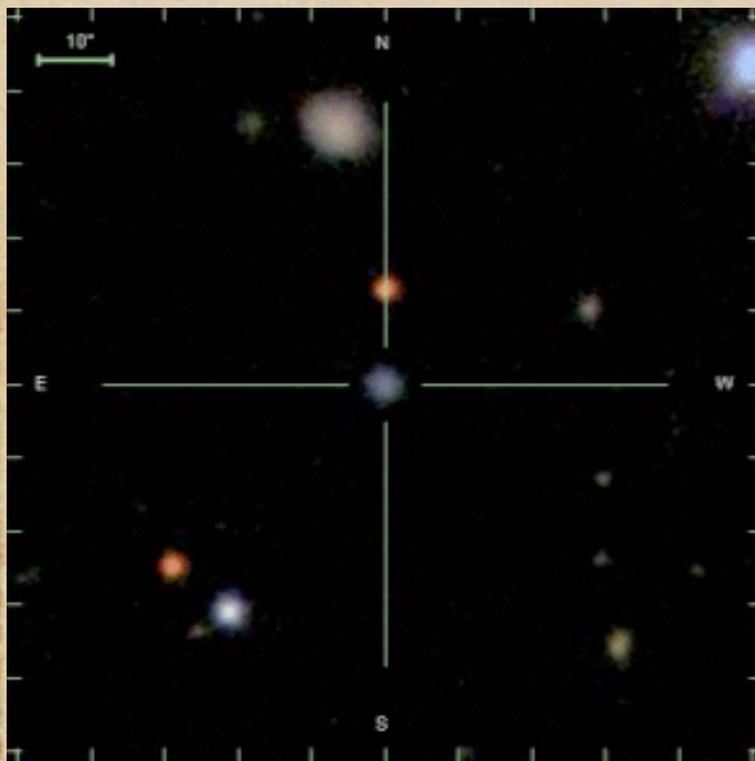

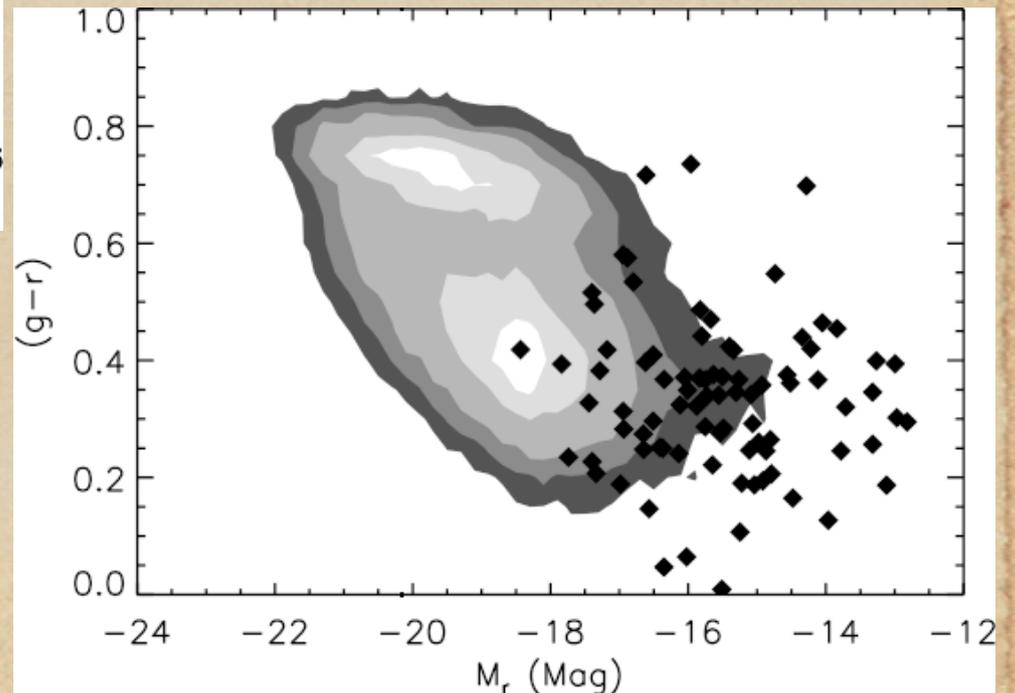

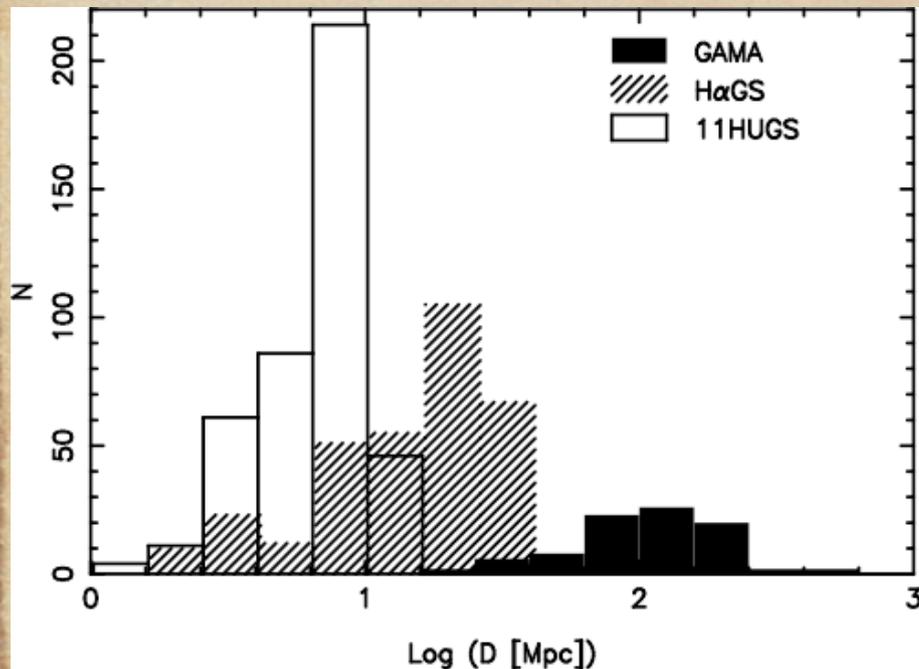

GAMA DR1

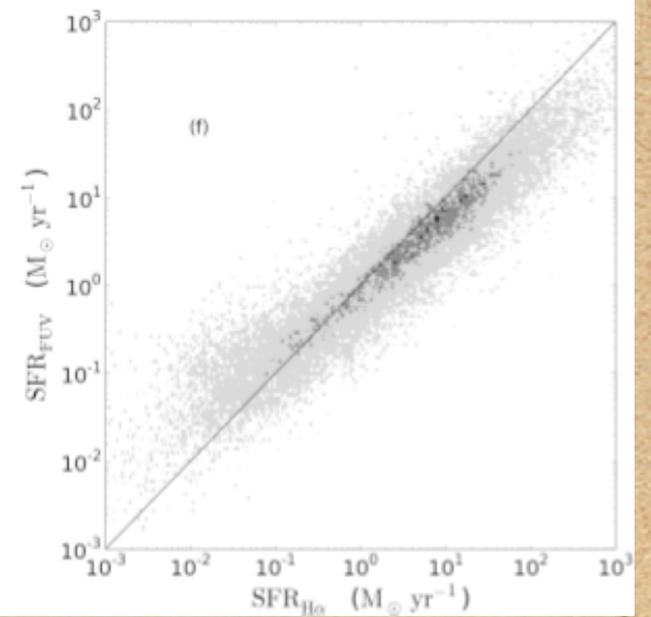

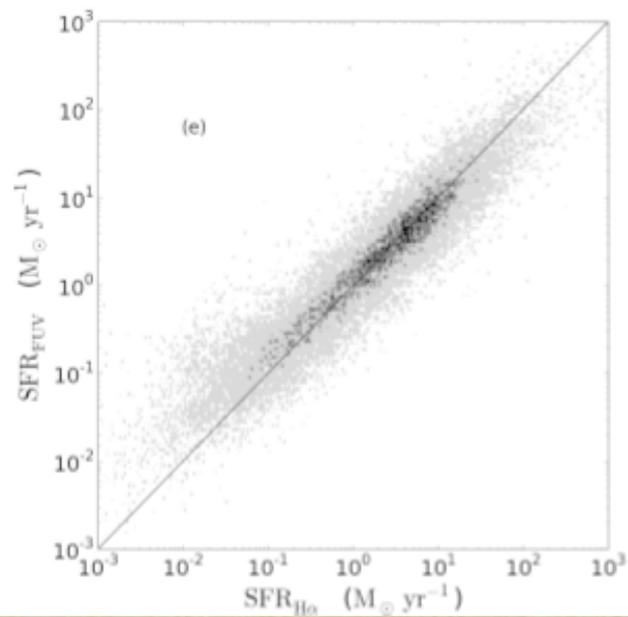

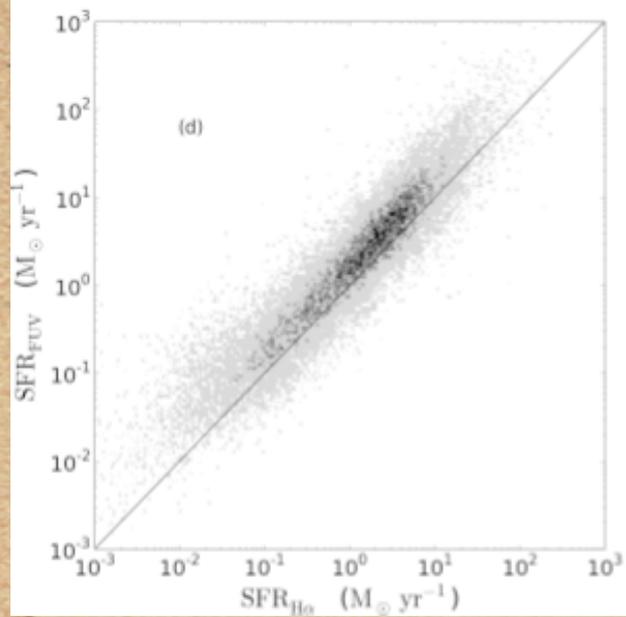

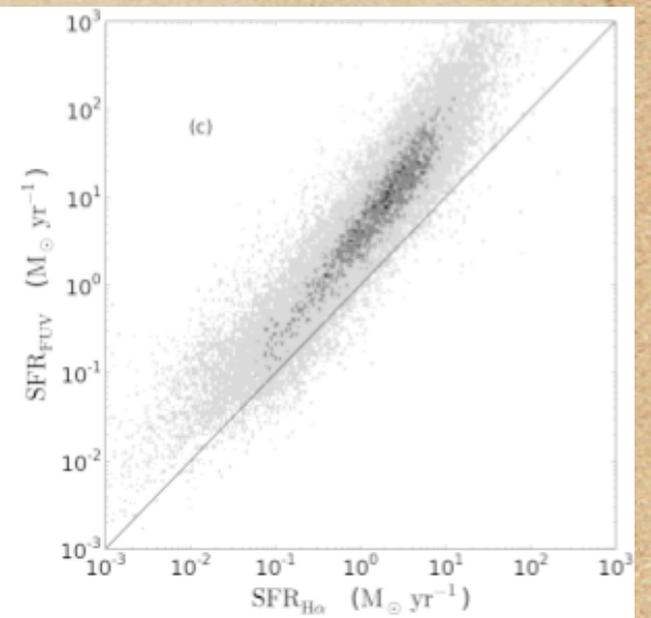

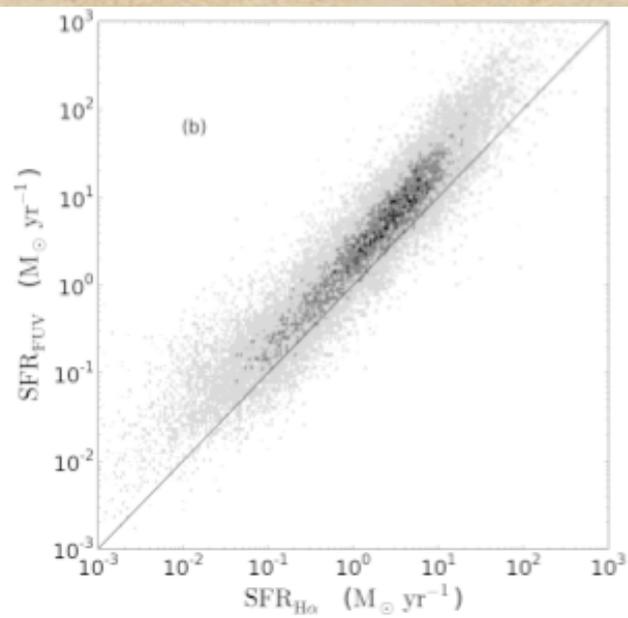

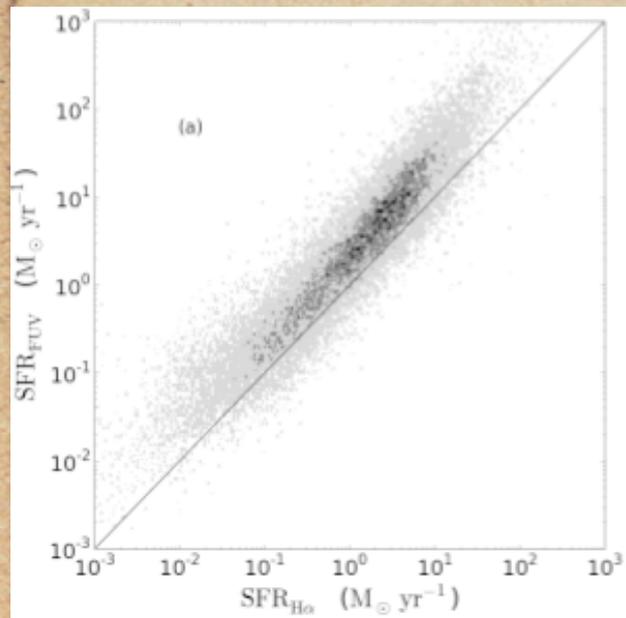

- ◆ www.gama-survey.org
- ◆ Three 4x12deg equatorial regions (G09, G12, G15)
- ◆ ~120000 photometric objects, to $r < 19.4$ (in G09, G15) and $r < 19.8$ (in G12)
- ◆ ~60000 with redshifts available in DR1, out to $z \sim 0.6$ ($\langle z \rangle \sim 0.2$)
- ◆ Driver et al 2010, MNRAS (in prep)

Little Blue Fuzzies

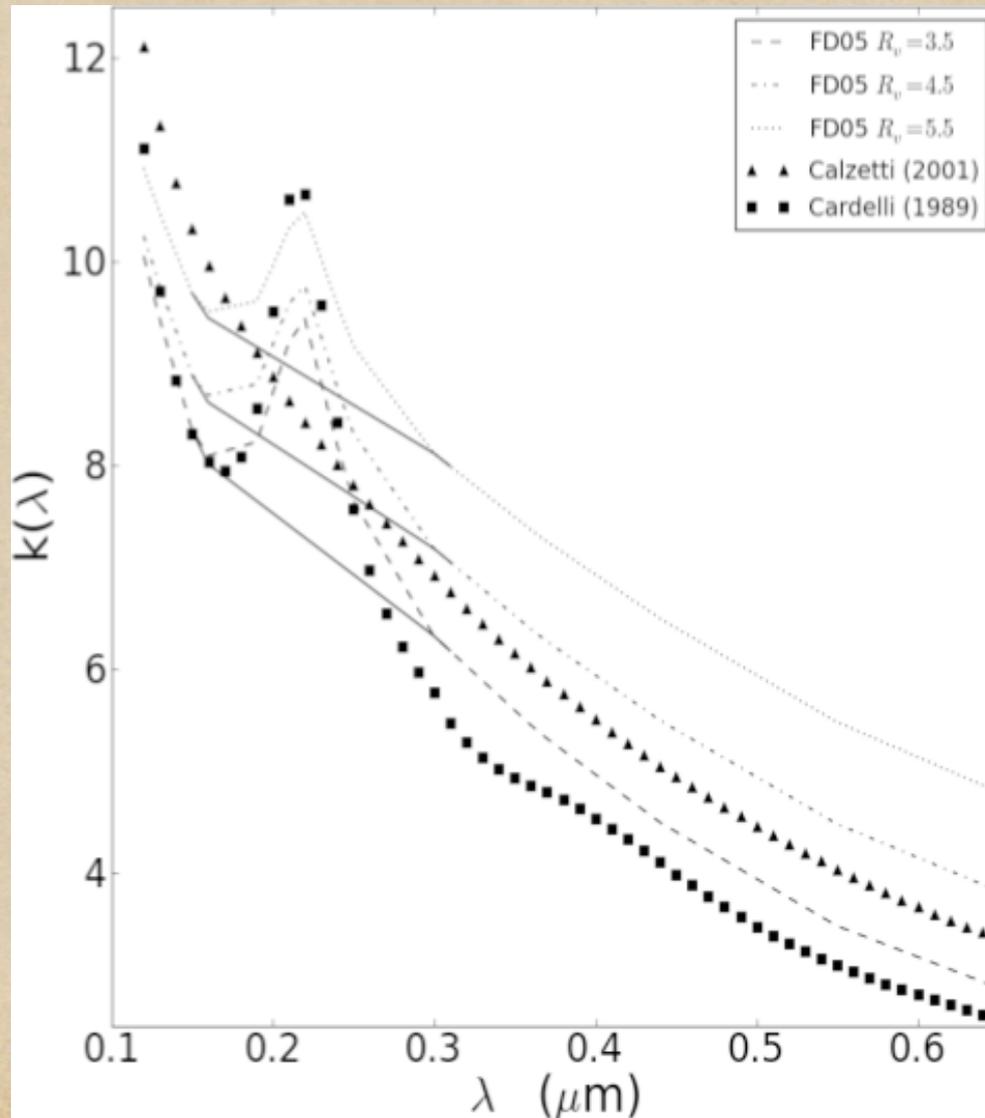

Slowest forming galaxies

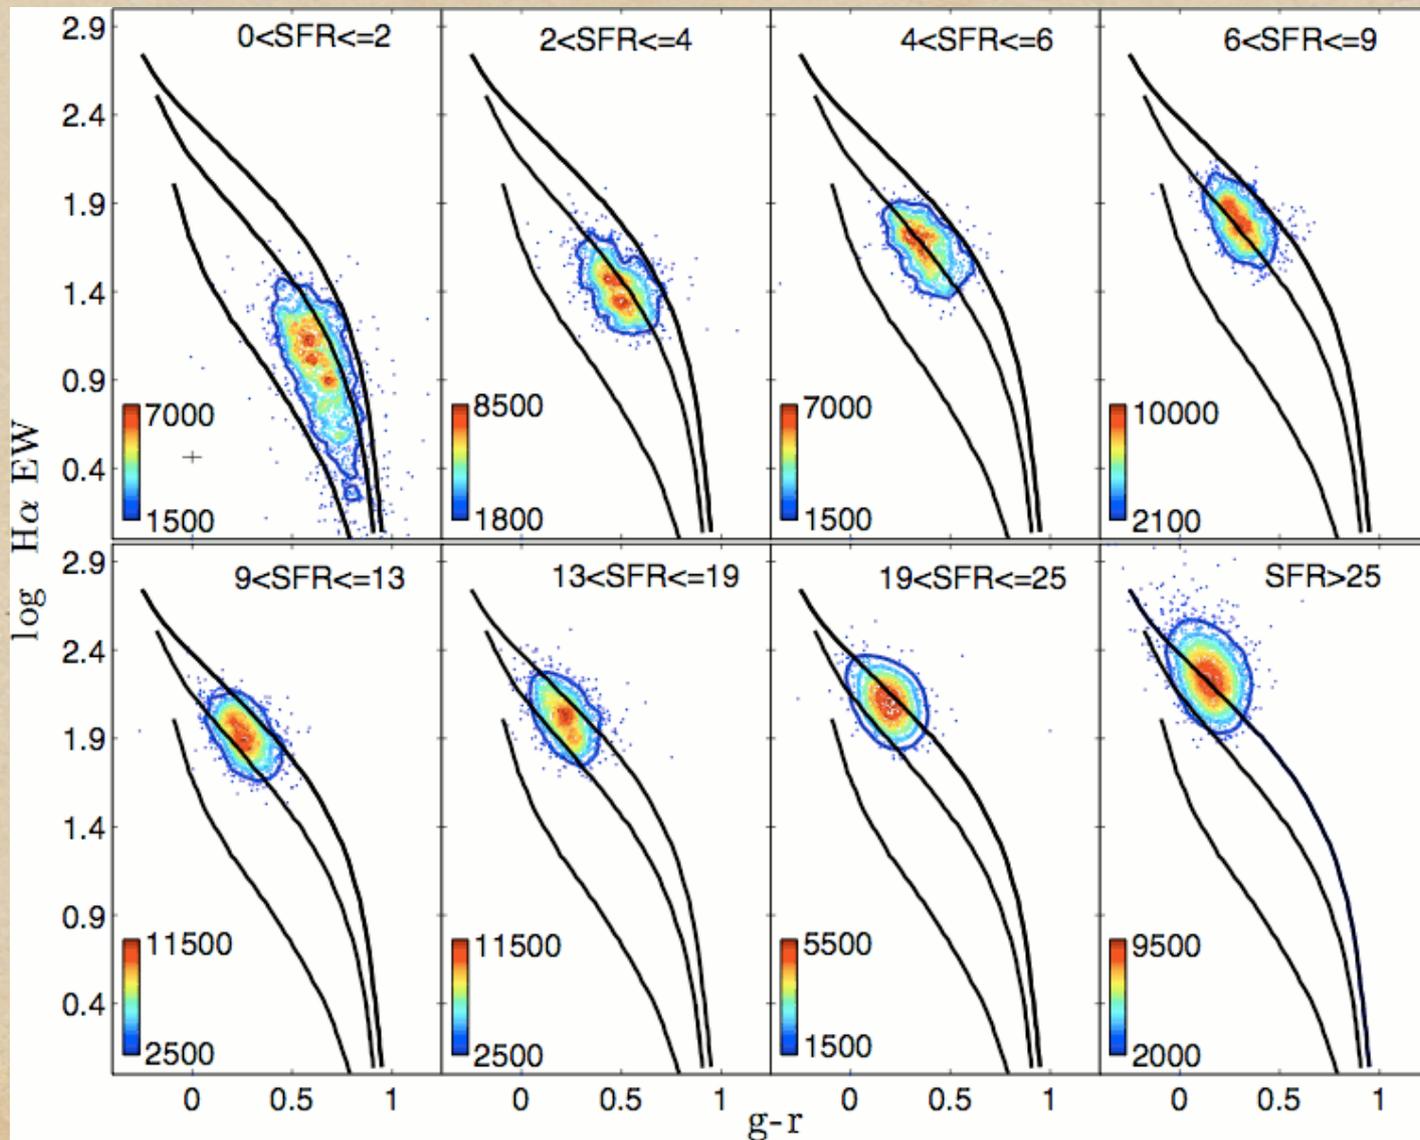

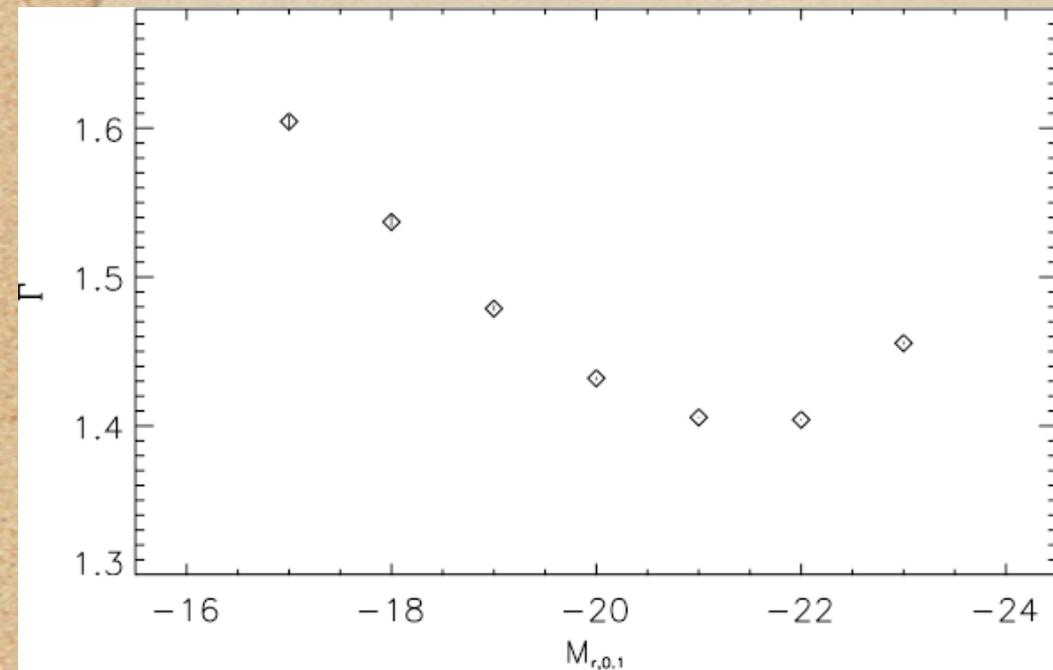

Obscuration curves

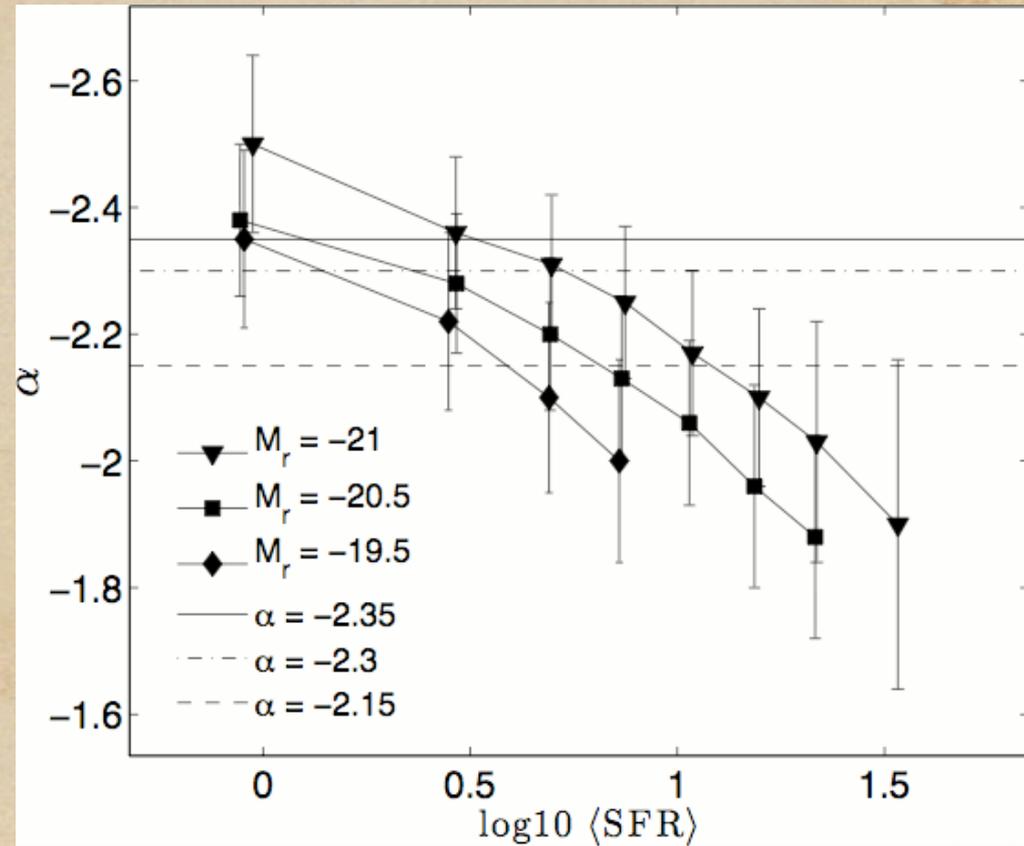

SFR-dependence of the IMF

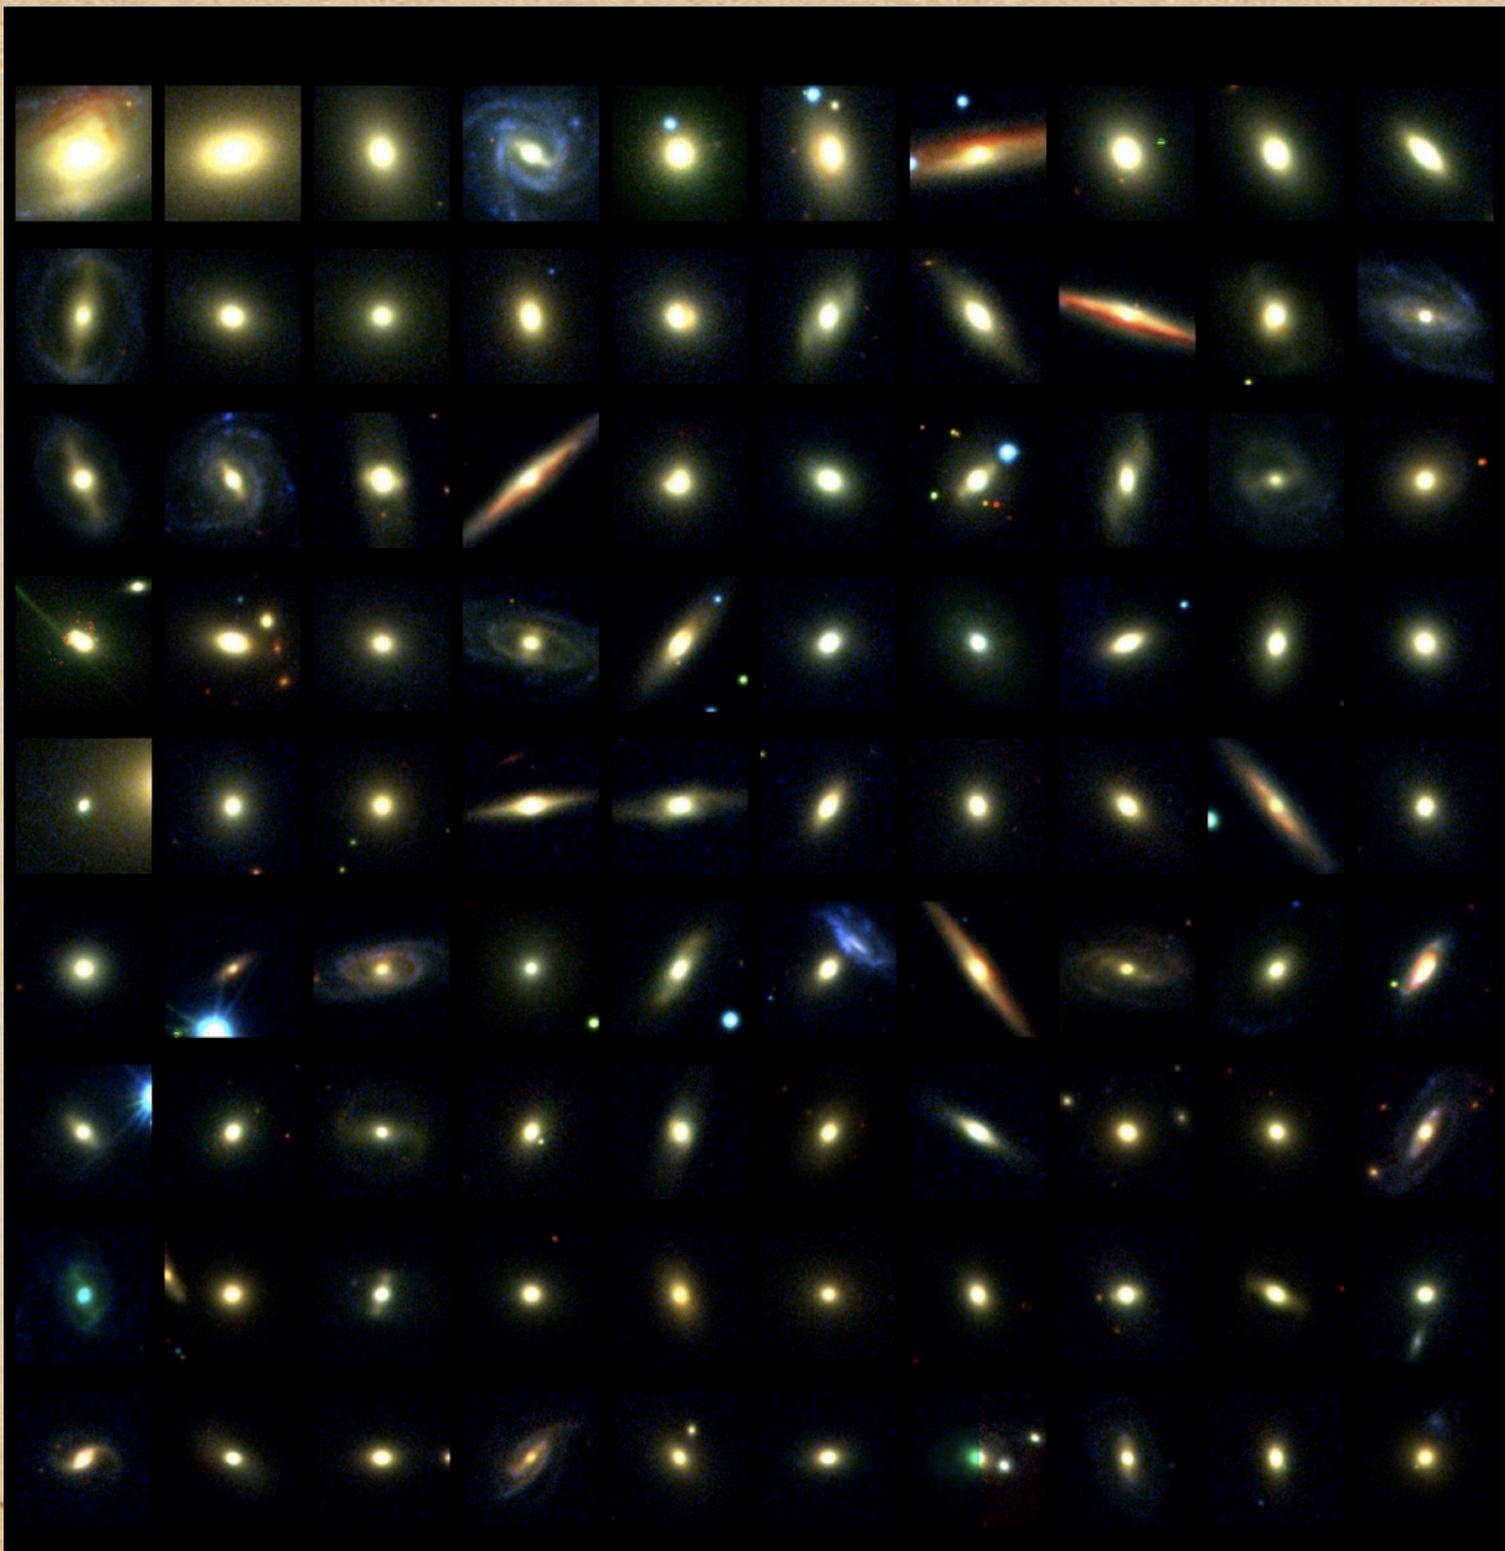

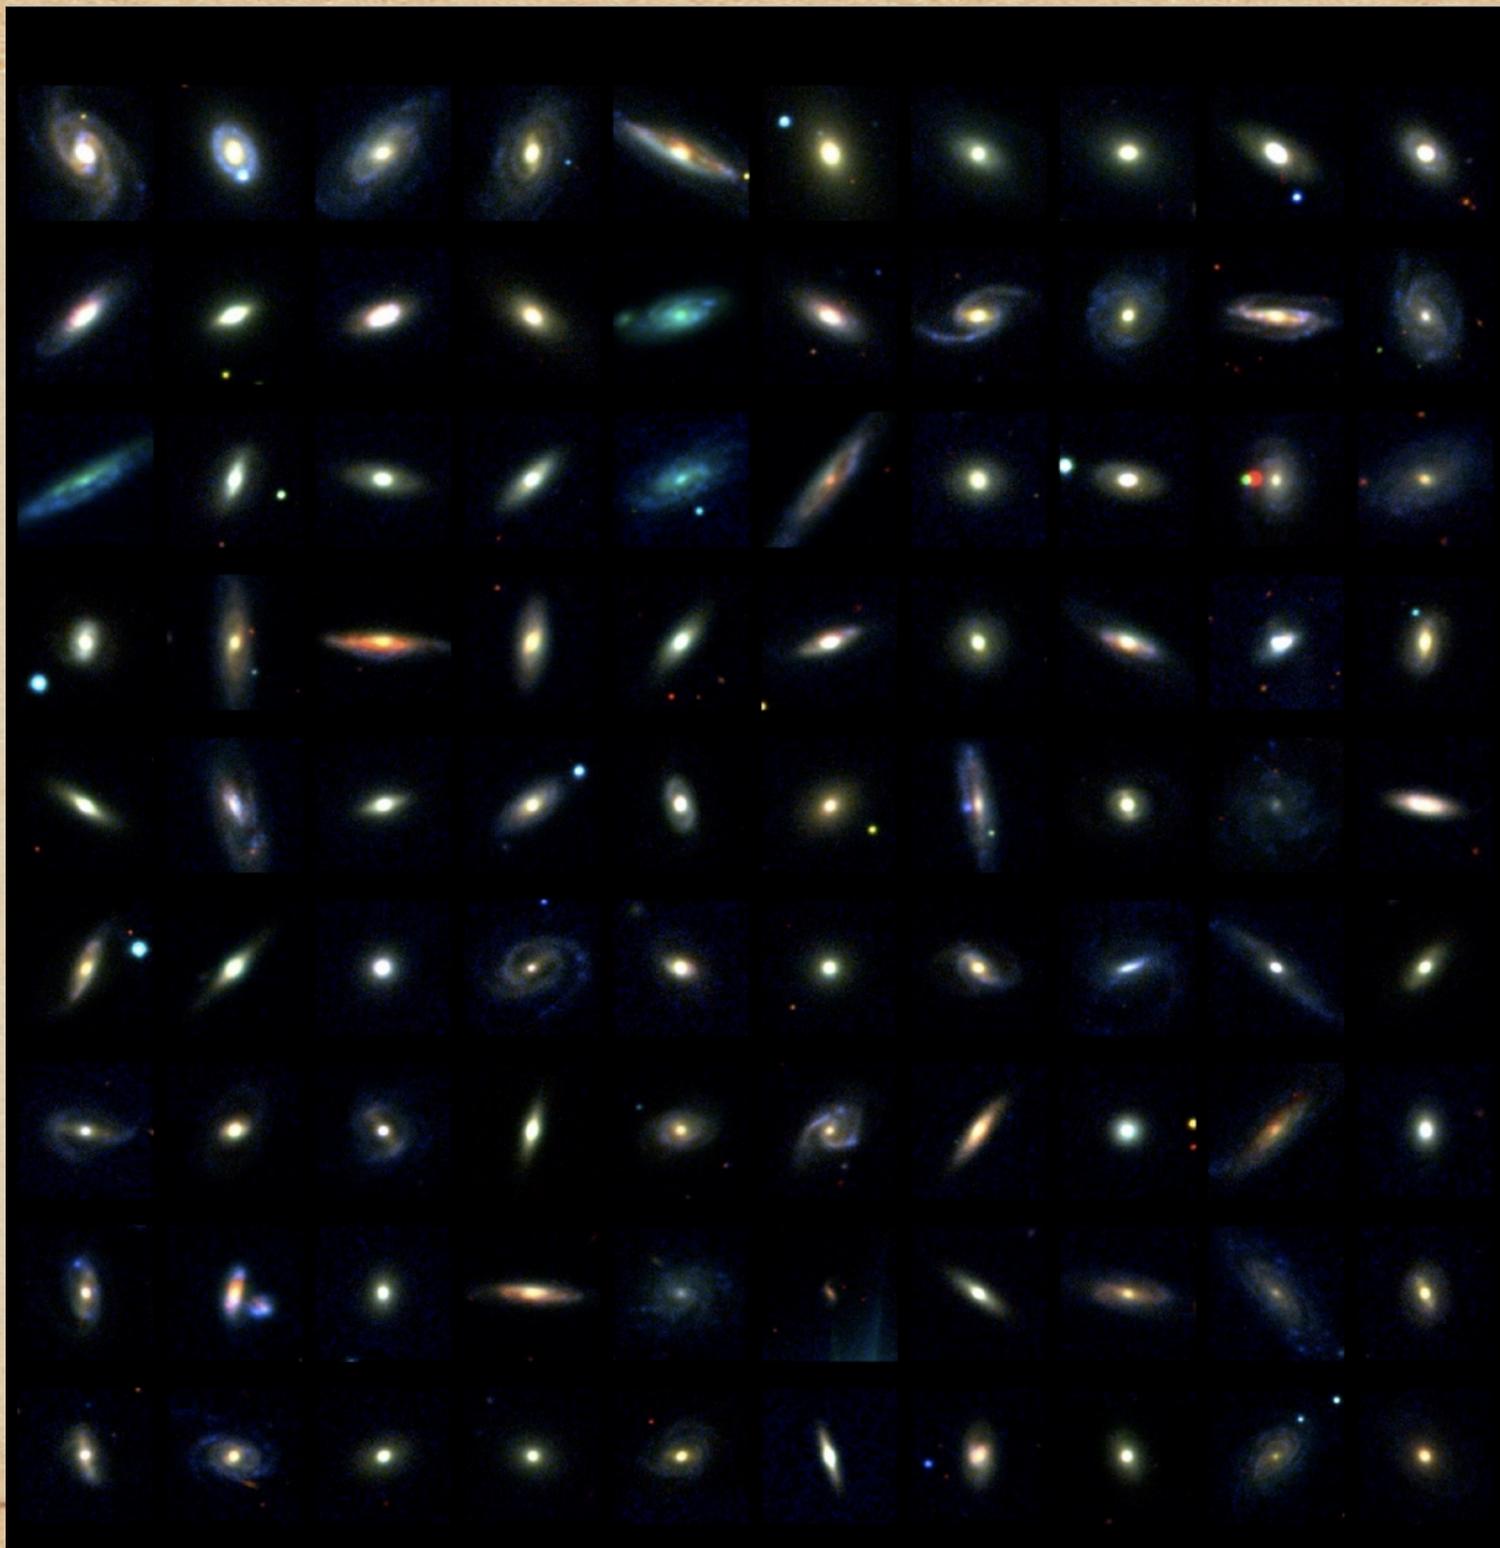

IMF dependence on SFR

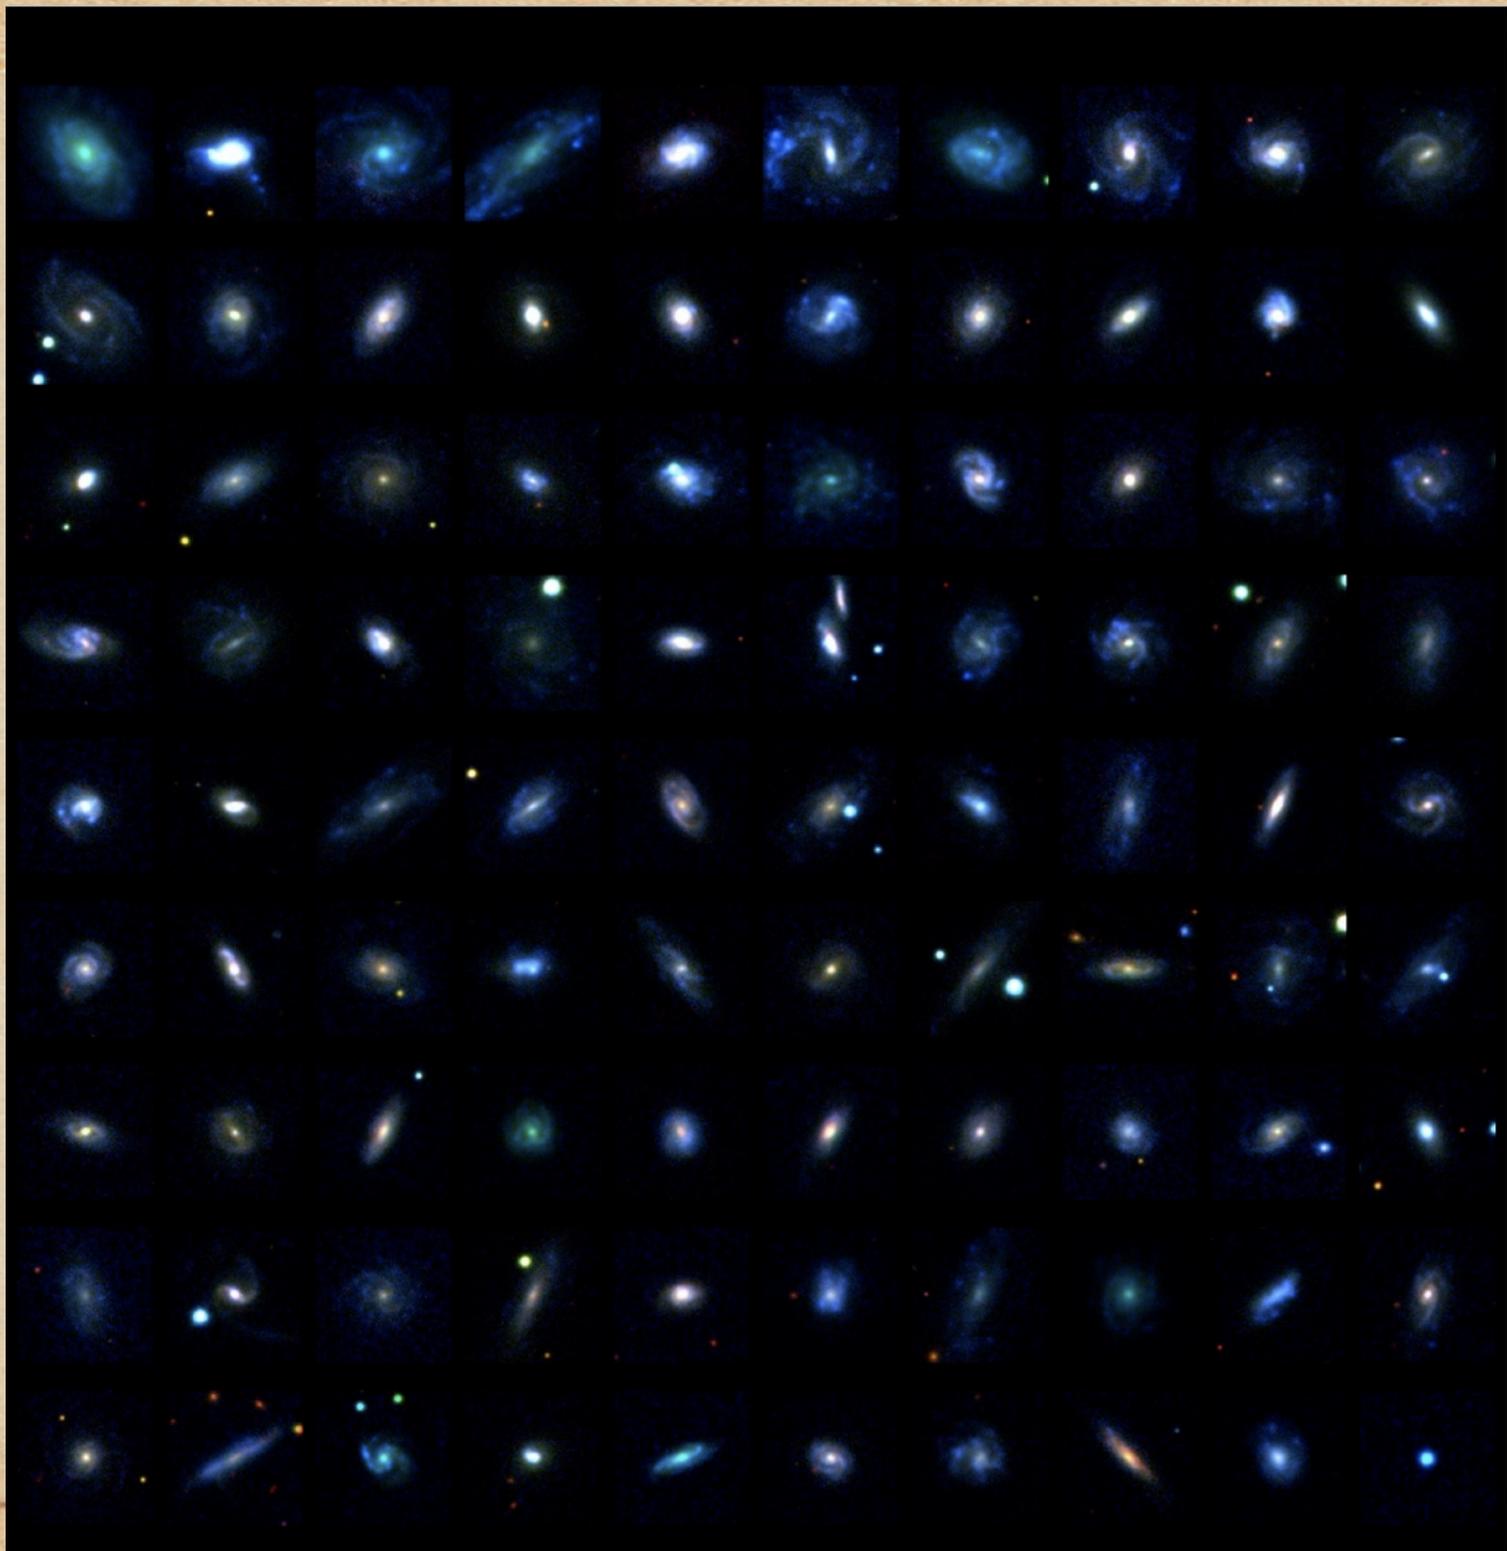

Hooversten & Glazebrook, 2008, ApJ, 675, 163

Summary

- ◆ GAMA has been remarkably successful to date, with lots of exciting science being produced:
- ◆ Some of the most distant dwarf star-forming galaxies yet measured
- ◆ Uniform and self-consistent obscuration corrections
- ◆ Evidence for a SFR-dependence in the IMF slope
- ◆ DR1 available at www.gama-survey.org
